Notes:

These are all from publicly available data sources that include both historical occurrences that may or may not need protection and current or active features.

Some of the original data such as GNIS Place Names are points and are represented here as such. Some of these do not have highly accurate locations. Polygon features are also represented as points only in the ROW.

Data sources include:

GNIS - US Geographic Names Database from USGS
 NRIS - National Register of Historic Places from NPS
 PADUS - Protected Area Database of the US from USGS
 ESRI - Street Map Data Distributed with ArcGIS (data from public sources)

No warranty is made by AES as to the current accuracy or validity of these data.
